

What do I need to do to pass?	What do I need to do to go beyond pass?	When should I be able to do this by?
All of: Install packages, assign objects, run commands, basic functions, use help files	All of pass, Use search engines to find advanced level packages / additional code as required	Week 1 [Also see Start Week set-up]
Knit an R Markdown document into Word	Understanding of statistical analyses plans and reproducible research	Week 2
Get data into R	and: Appropriate directory structure	Week 3 [Also see Start Week set-up]
Basic exploratory data analyses	Tables / graphics consideration of data issues (e.g. removal of groups with low frequency)	Week 3
Interpretation of descriptive statistics and graphics (one and two dimensions)	Appropriate selection and design of output which allows strong interpretation of context	Week 3
Identify and perform an appropriate hypothesis test for a given scenario	Sound understanding of the principles of hypothesis testing and statistical language	Week 4
Interpret the results of a hypothesis test	Appropriately summarise the results of a hypothesis test	Week 4
Generate and interpret the confidence interval of the mean (or mean difference)	Demonstrate awareness of link between hypothesis testing and confidence intervals	Week 5
Define research questions and plan appropriate analyses	Comprehensive statistical analyses plan for a given sceanrio	Week 6
Identify the dependent variable and an independent variable	Interpret the coefficients of a regression model	Week 7
Generate a simple linear regression model	Interpret the goodness of fit of a regression model	Week 7
Show and interpret multiple correlations	Select relevant correlations, providing clear summary; relating comments to context	Week 8
Generate multiple linear regression model; explain modelling choices made	Assess model assumptions and limitations	Week 8
Identify and resolve data issues/errors	Metadata; assertr	Week 9
Reduce the number of variables from a full multiple linear regression model	Show and justify full and logical decision making process for model selection	Week 10
Address a research question	Analyses highly relevant to research question	Week 11
Summarise the findings from a complete analyses	Identify issues with a complete analyses and how analyses could be improved	Week 11

Prepare for exam!

Organise materials for ease of future reference

Week 12
